HORTICULTURE CLASSES

DEFINITIONS AND SUGGESTIONS

1. STALK - is thick with branches, which have multiple flower heads, i.e., ageratum and impatiens.
STEM - is thin with branches, which have multiple flower heads, i.e., cosmos and petunias.
SPIKE - non-branched with multiple flower heads, i.e. gladiolus & snapdragons
BLOOM - 1 bloom per branch of foliage, i.e., marigold and zinnia.
2. The length of stem, stalk, etc. should be long enough to properly show off the flower. In past years many exhibitors cut their stems, etc., WAY TOO SHORT. For example, Carnation marigolds should have a branch between 12" - 18" long.
3. Displaying your flower is very important. Choose a container so that 1/3 of stem, etc., is below the top of the container and 2/3 is above the top of the container.
4. Leave as much foliage as possible on each stem, stalk, etc. YOU MAY NOT PUT EXTRA FOLIAGE STEMS IN CONTAINER.
5. Flowers and foliage should be groomed. Carefully remove insect bites from petals and foliage by using a tweezers and/or manicuring scissors.
